In-Line Exhaust Fans

Last Updated: Thursday, June 30th, 2011, Created: Monday, June 25th, 2001

Here's an introduction to a special kind of exhaust fan -- an "In-Line" fan. This means that rather than having the motor right at the ceiling, they can be placed anywhere along the line of the ductwork. This makes their installation much more flexible, and quieter. Equipment details can be found at Continental Fan.
